**DETAILED ACTION**

***Specification***

1. The disclosure is objected to because of the following informalities: At the beginning of the specification, the continuing data needs to be updated such as the US SN 10/303,291 filed on November 23 2002 is now US patent 6,672,708.

It is noted that the parent US application serial No.09/855,093 filed 05/14/2001, US patent 6,505,912 is a continuation of US serial No. 09/112,806, filed 7/10/1998, now US patent 6,247,790.

Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

4. Regarding claim 1, lines 12-15, the phrase "etching both layers of thermally expandable material----- and define an ink ejection port" renders the claim indefinite because it is unclear how the ink ejection port is formed by etching both the layers of thermally expandable material on the heating circuit material?

***Double Patenting***

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 1-7 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-2,5-6 of U.S. Patent No.

6,267,904. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims in patent 6,267,904 broadly encompasses the instant invention as such as that both the invention claiming an etching process to form thermal actuator which could be bend upon heating to help ink ejection.

7. Claims 1-7 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-8 of U.S. Patent No. 6,331,258.

Although the conflicting claims are not identical, they are not patentably distinct from each other because both the patent '258 and the instant invention claim etching to form a thermal actuator, which could be, bend upon heating to help ink ejection.

8. Claims 1-2 rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1,3 of U.S. Patent No. 6,241,906.

Although the conflicting claims are not identical, they are not patentably distinct from each other because the invention in patent '906 broadly encompasses the instant invention as such as that both the invention claiming an etching process to form thermal actuator which could be bend upon heating to help ink ejection.

### ***Conclusion***

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bobrow et al (5,889,541) teach an ink jet printer including movable member made out of deformable metal layer; Ishii et al (5,804,083) disclose a micromachining process to form a ink jet print head and Miura et al (4,728,392) teach a conventional process for making ink jet print head.
